SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Sir:

Pursuant to Applicant(s) duty of disclosure, the information listed in the attached form PTO/SB/08A is brought to the attention of the Examiner. Copies of the U.S. patent documents are not provided in accordance with the waiver of that requirement under 37 C.F.R. §1.98.

The citation of the listed items is not a representation that they constitute a complete or exhaustive listing of the relevant art or that the references are prior art. The items listed are submitted in good faith, but are not intended to substitute for the Examiner's search. It is hoped, however, that in addition to apprising the Examiner of these particular items, they will assist in identifying fields of search and in making as full and complete a search as possible.

DE3045996A1 discloses an electrical surgical device with a selector switch for "monopolar" and "bipolar" operating modes, and with an additional selector switch effective in the "monopolar" mode for "cut" and "coagulate" sub-modes, and with at least one adjustable resistance to adjust the output power in each operating mode, whereby in monopolar mode an

output connection of the device is connected with the patient's body by means of a plate electrode and the other output connection of the device is connection to a so-called active electrode held by the surgeon, and in bipolar mode both output connections of the device are connected with two electrodes to be held by the surgeon that are preferably designed as forceps with arms electrically insulated from each other, the value (R) of the resistance determining the output power of the device may be increased by actuation of a first contact (K1) mounted in the handgrip of the electrode to be held by the surgeon and connected electrically to the device, and may be decreased by actuation of a second contact (K2) of the same type.

FR2235669 discloses a gynecological device for female sterilization by electrocoagulation of the fallopian tubes and drug insufflations and/or vaginal hydrosalpinx puncture, characterized by the fact that a hollow electrode is inserted into a tube having a judiciously calculated distal curve and by the fact that it slides inside the tube to extend beyond the tube by a predetermined length.

The filing of this information disclosure statement is not an admission that the information cited herein is, or is considered to be, material to patentability as defined in 37 C.F.R. §1.56(b).
